Let's Save the Manatees

A (06) Listen and read.

Manatees are large animals that live in water. They are also known as sea cows. They live in the Caribbean Sea and in freshwater lakes and rivers. They are smart, friendly, and cute, but they are also endangered. Their numbers are declining for a number of reasons.

Manatees need clean water, and they like warm temperatures. But garbage and dirty water are threatening their environment. We could recycle more often to reduce the amount of plastic in the water. This would help manatees a lot.

Manatees love people, but sometimes people can hurt them in accidents. There are places in Florida where people can swim with manatees. Many people don't like this idea, though. They think it's safer for manatees to swim alone.

The biggest danger to manatees, however, is boats. Around 500 manatees die each year when they are hit by propellers. There are too many boats in the shallow water where manatees live. Boats can be made to slow down in these waters. Even so, most boats are still a threat to manatees.

Manatees are fun to look at, but we should give them space. By taking care of them and their environment, we can make sure they are safe.

B Match the questions to the answers.

1. What causes the most manatee deaths?   •   • a. Florida
2. Where can people swim with manatees?   •   • b. recycle
3. What can we do to help manatees' environment? •   • c. boats

C Read and circle.

1. Manatees live in the Caribbean Sea / Pacific Ocean.
2. Manatees like cold / warm temperatures.
3. There are too many / not enough people swimming with manatees.
4. We could make boats go faster / more slowly in manatee waters.

A Read the story. Look at the words below. Then write.

China is a big, beautiful country, but it has some environmental problems. ❶ _____ Pollution is a big problem everywhere: in cities and forests. Because of the pollution, there is not enough ❷ _____.
